THE COLLECTION OF
MOLDED PLYWOOD
FURNITURE

designed by

CHARLES EAMES

manufactured by
EVANS PRODUCTS
COMPANY

national distributors:

HERMAN MILLER
FURNITURE COMPANY
Zeeland, Michigan

The most comfortable chairs you have ever sat in. The most practical furniture you have ever owned.

Charles Eames, the designer, and Evans Products Co., the manufacturer, have made use of today's most original design thinking and advanced technological processes to bring you chairs designed to fit your body and to yield to it; chairs and tables that are light to lift or carry; furniture with permanently-finished surfaces easier to keep clean than any furniture you have ever had.

Because the furniture, with its revolutionary construction, can be mass-produced by methods hitherto unheard-of, it reaches you at prices you can afford.

Beauty is inherent in the sculptured curves, the fine wood textures and colors, the clean details that endow the furniture with a look of lightness and grace.

The collection includes: dining tables, dining chairs, lounge chairs, occasional tables and a screen. Additions will be made to the collection from time to time.

Sit in the chairs; you have never known such seating comfort.

DCWI DINING
All plywood dining chair

Charles Eames chairs are designed in two heights, lounge height and dining height. Both heights are available with molded plywood legs or chromium-plated legs.

All Wood Coffee Table

Some of the techniques that cause Charles Eames chairs to provide an unprecedented maximum of comfort and practicability:

1. Use of molded plywood for seats and backs. Bonded together at the time of molding, these molded pieces permanently hold their shape. Specifically designed to conform to the human body's contours, they provide absolute comfort.

2. Use of rubber shock mounts to connect seats and backs to metal or plywood leg-frames. Made of synthetic rubber that has been tested for resistance to oil or grease, these thick rubber discs permit the chairs to flex as the sitter changes his position.

3. Integral finish. All wood parts have been treated with a resinous impregnation so that the wood and the resin literally become one as they are molded. This results in an extremely durable finish, resistant to scratches and dents, and far superior to an externally applied finish.

LCM LOW
Plywood and metal lounge chair

The same grace, practicality, and sound design that characterize the chairs are present in the coffee table, the folding screen, the dining table.

Included in a complete exhibition of this furniture by Charles Eames in a one-man show at the Museum of Modern Art in New York City, and winner of the 1946 Design Award of the American Institute of Decorators, the coffee table is light and airy in appearance, and at the same time, extremely sturdy and serviceable.

The dining table, with walnut top and molded plywood legs, measures 34" by 54". Special multiple-finishing processes have been evolved by the manufacturer to assure you of surfaces that are durable and resistant. The detachable legs are precision-joined to the top to eliminate wobbling. This is a table eminently suited to contemporary living needs because of its simple lines, excellent scale, and moderate price.

The folding screen, made of curved molded plywood panels, attached with flexible fabric strips, is decorative both in its form and in its use of rare and interesting woods. It folds to slim compactness for storage when not in use. The screen is five feet eight inches high, extends to 60 inches.
